EXAMINER'S COMMENTS

Claims 16-23 and 33-35 are allowable.

The application is allowable for the reasons set forth on page 7 of the decision of the Board of Patent Appeals and Interferences of 12 October 2010.

The closest prior art teaches the following:

Belford et al. (1997, J of Endocrinology 154:45-55) discloses isolation of a fraction rich in growth factors, including TGF- β and IGF-1, from whey by single step cation exchange chromatography;

Kussendrager et al. (1998 EP 0869134) teaches a process for recovering one or more growth factors from milk or milk derivatives comprising adsorbing the starting product to a cation exchanger, followed by fractionated elution of the cation exchanger.

Quinque et al. (1992, WO 9200014) teach a two step method to isolate growth factors from colostrums, the method comprising contacting the colostrums with a cation exchanger and subjecting the fraction obtained by elution of the cation exchanger to hydroxyapatite adsorption. The fraction retained on the hydroxyapatite is recovered by elution with phosphate buffer. The retained, active fraction contains growth factors.

None of these teachings, either individually or combined, anticipate the methods of the claimed invention: a two step process to obtain the following fractions:

a fraction comprising IGF-1, wherein the ratio IGF-1 to TGF- β is greater than 10:1

a fraction comprising TGF- β , wherein the ratio TGF- β to IGF-1 is greater than 5:1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.
